Kelby Gassman

Senior Product Designer, Design Systems

Leesburg, VA | kelby.gassman@gmail.com | kelbygassman.com | linkedin.com/in/kelby-gassman

SUMMARY

Designer with 12+ years of experience and 6 years leading design systems used by multiple teams across retail, games, and multi-brand platforms. I build tiered token architectures, multi-brand theming, and accessible component libraries, plus the AI skills and agent instructions that teach tools like Claude Code to build with a system correctly. Comfortable in both design and code, and focused on making complex products consistent without slowing teams down.

EXPERIENCE

Senior UX Designer | CompanyCam — Remote (US) | June 2026 – Present

- Building a full-stack design system of tiered tokens (Figma Variables to code via Style Dictionary), components, and documentation that product teams, designers, and engineers use to take ideas from concept to shipped features.
- Designing end-to-end AI enablement for the system: skills, agent instructions, MCP servers, and docs that let AI tools like Claude Code build with the right components and patterns by default.
- Prototyping and validating components in Storybook with Claude Code and React, testing behavior against real implementation rather than static mockups.
- Raising the craft bar across the system while coaching designers and engineers to apply it well.

Lead UX Designer | Epic Games — Remote (US) | October 2024 – June 2026

- Led design and evolution of the Fortnite Design System across 4+ products and 3 platforms, serving cross-functional design and engineering teams.
- Set system standards and aligned guidelines with Fortnite's product vision, partnering directly with stakeholders and team leads across multiple workstreams.
- Audited and closed gaps in component coverage, documentation, accessibility, and team knowledge, prioritizing high-impact improvements to the system's foundations.

Senior UX Designer | The Home Depot — Remote (US) | January 2024 – October 2024

- Led the redesign of the enterprise communications design system (25+ components, templates, and type styles), reaching full WCAG 2.1 AA compliance across all customer-facing email.
- Partnered with front-end engineers to align system outputs with production technology, reducing drift between design handoff and implementation.
- Established end-to-end patterns that raised brand consistency across customer and Pro communications products.

Design Technologist | Amazon — Remote (US) | August 2022 – December 2023

- Architected Amazon Games' first design system: a unified, extensible component framework supporting multiple teams and products.
- Built a design token system that automated theming across products and removed manual design-to-code translation.
- Drove adoption through influence, growing a community of 10–15 designers and engineers actively contributing to a distributed system.

Senior UX Engineer | Monster Worldwide — Remote (US) | October 2020 – August 2022

- Built, published, and maintained a multi-tenant design system (Core and Monster) serving multiple brands across Monster and Randstad products.
- Redesigned Monster's search and discovery experiences, simplifying complex job-search workflows for job seekers, recruiters, and employers.

SKILLS

Design systems: tiered design token architecture, Figma Variables, Style Dictionary, Storybook, multi-brand theming, component APIs, documentation, governance and adoption, accessibility (WCAG 2.1 AA)

AI and code: AI skills and agent instructions, MCP servers, Claude Code, Claude Design, React, HTML, CSS, JavaScript

Craft: Figma, typography, color, motion and animation (web and mobile), UX and UI design, Adobe Creative Suite

EDUCATION

BFA, Computer Game Design | George Mason University — 2013
